RunPod Proof of Use: Team CodeBlack (SDC Hackathon 2026)

Project: Mustaqbal AI. Endpoint deployed and tested by Hussain (AI matching & RunPod lead). Evidence dates: 23 to 25 Oct 2026 (MYT). Repository: https://github.com/xlBABA/CodeBlack_SDC. Live site: https://mustaqbal-ai.replit.app

Screenshot 1: RunPod billing. Balance $24.67 of $25 sponsor credit, spend rate $0.000/hr (nothing running when idle).

1. Endpoint

Endpoint name	CodeBlack_SDC (Queue-based Serverless)
Endpoint ID	f0phohhegtydji
GPU	1 GPU, 24 GB class (screenshot 3)
Source	GitHub integration: xIBABA/CodeBlack_SDC, branch feature/hussain-matching, Dockerfile runpod-worker/Dockerfile
Workload	Sentence embeddings with sentence-transformers/all-MiniLM-L6-v2 (384 dimensions), model baked into the image at build time

2. Build

Completed	Commit f4e03e8 "Make runpod-worker Dockerfile build from the repo root" (screenshot 4)
Failed (earlier)	Commit 61373a5 with the old Dockerfile (COPY paths relative to runpod-worker/), fixed in f4e03e8.

3. Test request (RunPod console)

Input	{"input": {"texts": ["SQL", "Database Querying"]}}
Result	COMPLETED, "dim": 384 (screenshot 2)
Delay time	19.62 s (queue plus cold start; the worker had scaled to zero)
Execution time	345 ms
Request ID / worker	7de2e7d8-32af-4344-a250-b8235f9ed794-e1 / 7m7rcmeirlyvbj

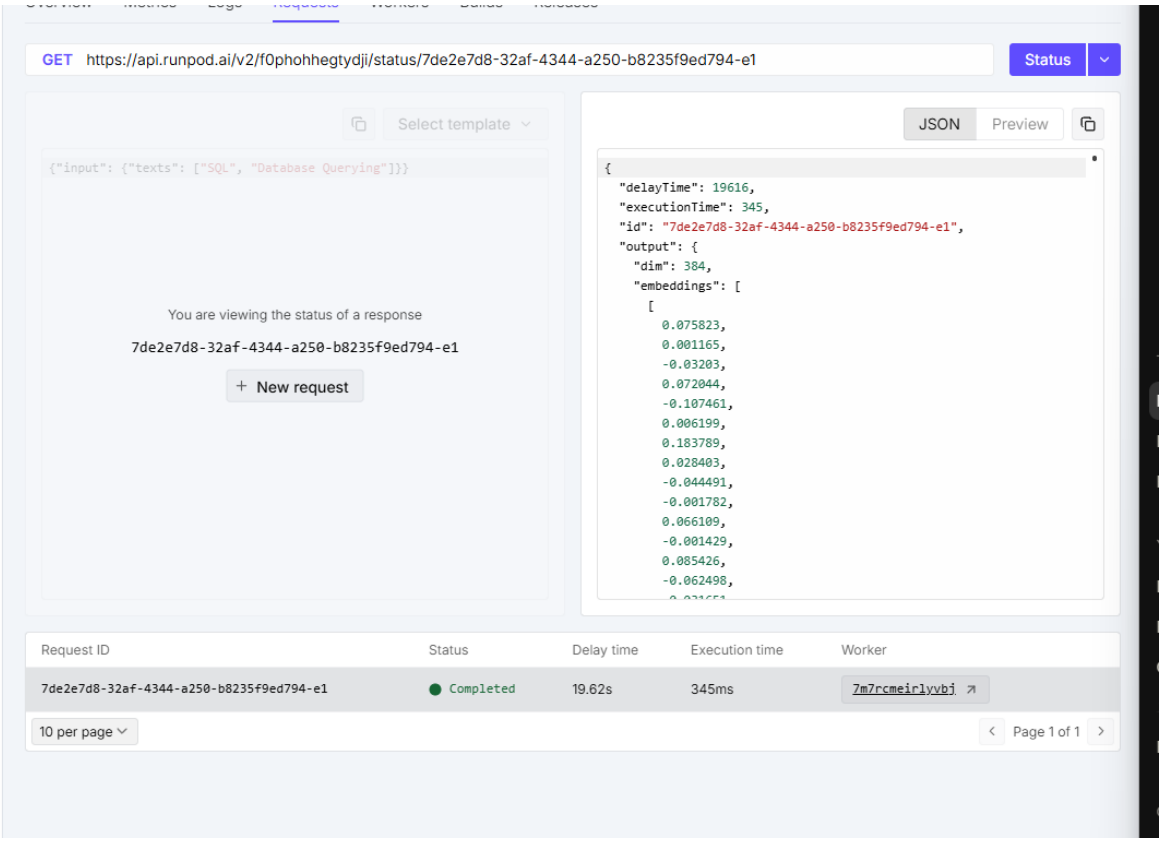

4. Live integration results (23 and 24 Oct 2026)

Raw /runsync calls	4 calls, HTTP 200. Cold call 25.42 s wall-clock (delay 24,739 ms, execution 347 ms); warm call 1.04 s (delay 492 ms, execution 199 ms). Model sentence-transformers/all-MiniLM-L6-v2, 384 dimensions.
Matcher client	RunPodEmbeddingProvider embedded 22 catalogue skills against the live endpoint in 30.3 s including a cold start; response validation accepted the real output.
Backend adapter	Live: 2.8 s warm (29.3 s cold), no "degraded" caveat. Invalid key (HTTP 401): 0.2 s, fell back to exact matching with the degraded caveat on 4 of 4 roles. Endpoint variables unset: same fallback, no network call.
Free-text skills	"Database Querying" mapped to SQL at similarity 0.71, "Visual data presentation" to Data Visualization at 0.78; "Cooking" not mapped (best 0.35). Mapped skills get half credit and a "please confirm" caveat.
30-role review	10 fictional students over 30 roles with RunPod live: 46 s, no degraded results. Cosine of "SQL" and "Database Querying": 0.7061.
Note	Single samples from one machine. Details in docs/proof/runpod/README.md, live-run.md and docs/review-30-roles.md section 9.

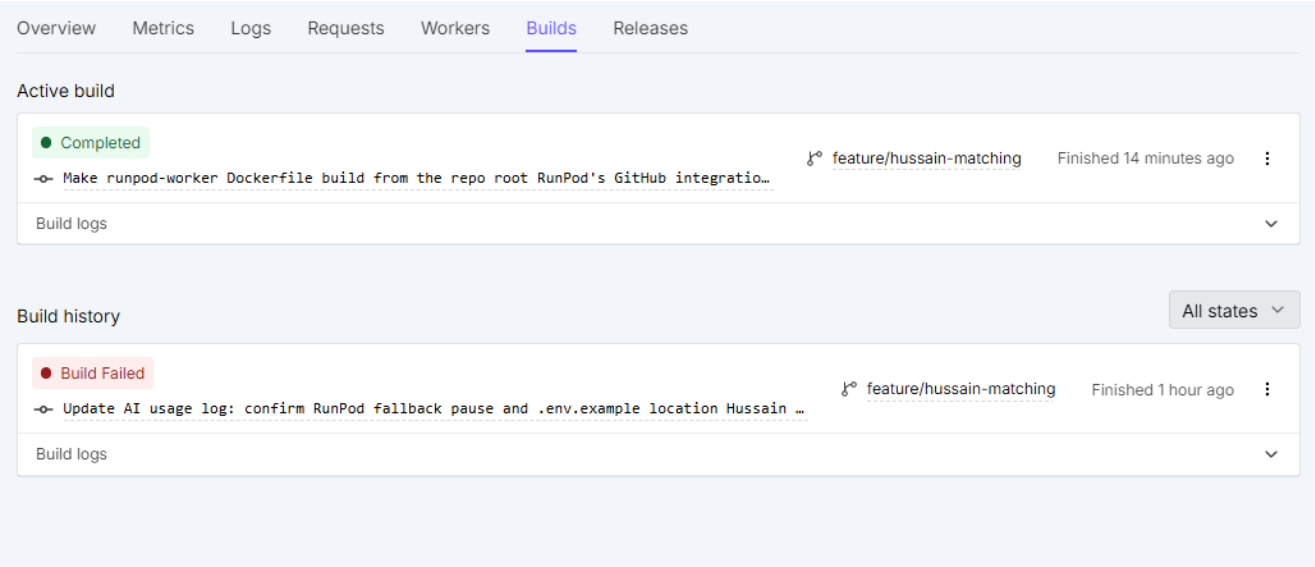

5. Cost

Credits	$25.00 sponsor credit; balance $24.67 at 01:37 on 25 Oct 2026 (screenshot 1). Spend rate $0/hr when idle (scales to zero).
Funds	The embedding endpoint f0phohhegtydji (this document) and Z.ai GLM-5.3 on the RunPod sponsor Public Endpoint b1dd8hy2hqo1nb, used to turn CV PDF text into an editable profile draft.

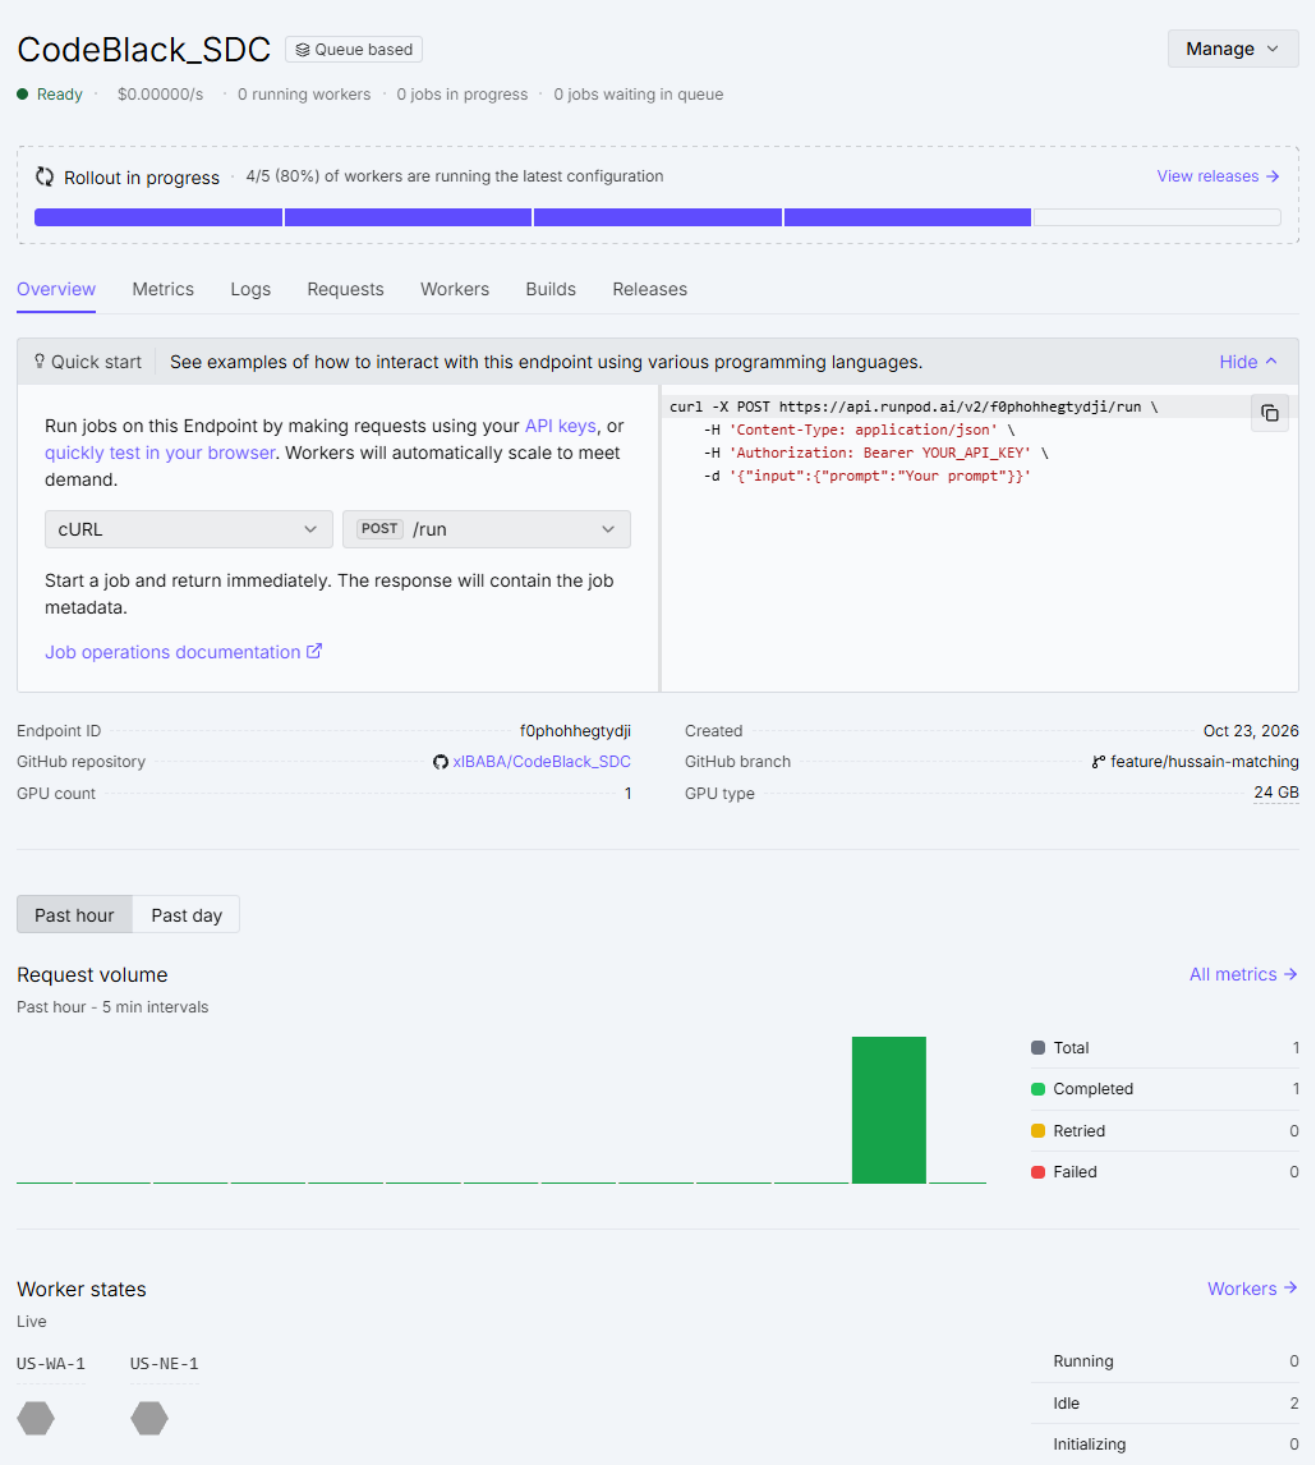

Security: no API key appears in any screenshot or in this document. The curl example on the endpoint page shows only RunPod's own placeholder text, YOUR_API_KEY.

Screenshot 2: request completed. Delay 19.62 s, execution 345 ms, dim 384.

Screenshot 4: Builds tab. Completed build of the repo-root Dockerfile fix, and the earlier failed build.

Screenshot 3: endpoint overview. Queue based, Ready, endpoint ID f0phohhegtydji, GitHub repo and branch, 1 GPU, 24 GB.
