Replit Proof of Use: Team CodeBlack (SDC Hackathon 2026)

Project: Mustaqbal AI. Live app: https://mustaqbal-ai.replit.app

Screenshot 1: Replit usage (account: Rehan, team leader), period 20 Oct to 19 Nov 2026. Spend $10.68 ($10.59 Replit Agent), $9.32 remaining. Browser tab: "Mustaqbal AI - Replit".

Screenshot 2: usage per resource. Agent on projects $10.59; Autoscale deployment 2 days, 1,150 requests, 41,186.57 compute units (project hosting $0.09); 0.02 GiB sent to visitors.

How Team CodeBlack used Replit

Hosting & deployment	The full Mustaqbal AI web app (React frontend served by the FastAPI backend) runs on a Replit Autoscale Deployment at https://mustaqbal-ai.replit.app (screenshot 2: 2 days of deployment, 1,150 requests).
Development with Replit Agent	Used by Rehan for the CV PDF extraction feature: timeout investigation, FastAPI improvements, diagnostics, implementation and automated testing ($10.59 of Agent usage on projects).
Secrets	API credentials (RunPod embedding endpoint and GLM-5.3) are stored in Replit Secrets on the server side, never in the code or repository.
Plan	Replit Core plan via the SDC sponsor voucher.
Usage summary	$10.68 spent in the current period, almost all on 24 Oct 2026 (integration and CV feature day); $9.32 of credit remaining.

Security: no API keys, secret values or passwords appear in this document.
